## Grupo de Trabajo "Socio-technical epistemology" (WG4)

<http://www.sintelnet.eu/content/socio-technical-epistemology>

Collective forms of use of ICT will have a deep impact on the way we socially acquire, maintain and distribute reliable knowledge. To address this issue, the general goals of WG3 are

- to stimulate and coordinate interdisciplinary research aimed at analysing and describing social processes and procedures that support the generation, acquisition and transmission of reliable knowledge, and
- to identify general principles for the design of future socio-technical infrastructures that promote the acquisition of reliable beliefs and knowledge. Some sample topics that are relevant for this WG are:
  - Reliable communication in socio-technical systems
  - Social reality as both the product of the agents' beliefs and an object of cognition
  - Argumentation in socio-technical systems
  - Opinion dynamics and social networks (the dynamics of epistemic agreement)
  - Interactive epistemology in socio-technical systems
  - Emergence of epistemic authority in social networks
  - Privacy as a social epistemic norm
  - Procedures to aggregate beliefs and judgments in socio-technical systems
